# Definitions

## General

Product data applies under the following conditions:

- Three hours of storage at ambient temperature followed by 30 minutes of warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

## Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as  $<$ ,  $\leq$ ,  $>$ ,  $\geq$ ,  $\pm$  or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

## Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under “Specifications with limits” above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

## Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value, e.g. dimensions or resolution of a setting parameter. Compliance is ensured by design.

## Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with  $<$ ,  $>$  or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

## Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter, e.g. nominal impedance. In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

## Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

## Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format “parameter: value”.

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bit per second (Gbps), million bit per second (Mbps), thousand bit per second (kbps), million symbols per second (Msps) or thousand symbols per second (ksps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Mbps, Msps, kbps, ksps and Msample/s are not SI units.

## High definition mode

|                         |                                                                                                                                                                                                                                                                         |                                                                  |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| General description     | The high definition mode increases the bit resolution of the waveform signal by using digital filtering, leading to reduced noise. Because of the digital trigger concept of the MXO 4, signals with increased numeric resolution are used as the input for triggering. |                                                                  |

|                           | glitch width                                                                                                                                                                                                                                             | 200 ps to 1000 s |
| Width                     | triggers on positive or negative pulse of specified width; width can be shorter, longer, inside or outside a specified range                                                                                                                             |                  |
|                           | pulse width                                                                                                                                                                                                                                              | 200 ps to 1000 s |
| Runt                      | triggers on pulse of positive, negative or either polarity that crosses one threshold but fails to cross a second threshold before crossing the first one again; runt pulse width can be arbitrary, shorter, longer, inside or outside a specified range |                  |
|                           | runt pulse width                                                                                                                                                                                                                                         | 200 ps to 1000 s |
| Window                    | triggers when signal enters or exits a specified voltage range; triggers also when signal stays inside or outside the voltage range for a specified period of time                                                                                       |                  |

|              |                                                                                                                                                                                                                                                       |                  |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Timeout      | triggers when signal stays high, low or unchanged for a specified period of time                                                                                                                                                                      |                  |
|              | timeout                                                                                                                                                                                                                                               | 0 ps to 1000 s   |
| Interval     | triggers when time between two consecutive edges of same slope (positive or negative) is shorter, longer, inside or outside a specified range                                                                                                         |                  |
|              | interval time                                                                                                                                                                                                                                         | 200 ps to 1000 s |
| Slew rate    | triggers when the time required by a signal edge to toggle between user-defined upper and lower voltage levels is shorter, longer, inside or outside a specified range; edge slope may be positive, negative or either                                |                  |
|              | toggle time                                                                                                                                                                                                                                           | 0 ps to 1000 s   |
| Setup & hold | triggers on setup time and hold time violations between clock and data present on any two input channels; monitored time interval may be specified by the user in the range from –100 s to 100 s around a clock edge and must be at least 200 ps wide |                  |
| Pattern      | triggers when a logical combination (and, nand, or, nor) of the input channels stays true for a period of time shorter, longer, inside or outside a specified range                                                                                   |                  |
| State        | triggers when a logical combination (and, nand, or, nor) of the input channels stays true at a slope (positive, negative or either) in one selected channel                                                                                           |                  |

|                                  |                                                                                                                                                                 |                                                                                                                                                                             |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Digital voltmeter

|                        |  |                                                 |
|------------------------|--|-------------------------------------------------|
| Accuracy               |  | related to channel settings of voltmeter source |
| Measurements           |  | DC, DC RMS, AC RMS                              |
| Sources                |  | C1, C2, C3, C4                                  |
| Number of measurements |  | up to 4                                         |
| Resolution             |  | up to 6 digits                                  |
| Bandwidth              |  | up to 20 MHz                                    |

## Display characteristics

|                                         |                                                                                                                                                                                                                                                    |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Diagram types                           | Yt, XY, zoom, spectrum                                                                                                                                                                                                                             |
| Display configuration (waveform layout) | The display area can be split into separate diagram areas by dragging and dropping signal icons. Each diagram area can hold any number of signals. Diagrams can be stacked on top of each other and later accessed via dynamic tabs (Tab 1, etc.). |
| Signal icons                            | Each active waveform is represented by a signal icon on the signal bar; the signal icon displays the individual vertical and acquisition settings.                                                                                                 |
| Toolbar                                 | Enables quick access to important tools; allows to set the most common parameters directly in a simple menu and gives access to more detailed parameters in the main menu; User-defined selection of tools in the toolbar.                         |
| Upper menu bar                          | Display trigger, horizontal and acquisition system settings; allows quick access to these settings.                                                                                                                                                |
| Main menu                               | Provides access to all instrument settings in a compact menu structure.                                                                                                                                                                            |
| Axis label                              | The x-axis and y-axis are labeled with values and physical unit.                                                                                                                                                                                   |
| Diagram label                           | Diagrams can be individually labeled with a descriptive, user-defined name.                                                                                                                                                                        |
| Diagram layout                          | The grid, crosshair, axis labeling and diagram labeling can be switched on and off separately.                                                                                                                                                     |
| Persistence                             | 50 ms to 50 s, or infinite                                                                                                                                                                                                                         |
| Zoom                                    | vertical and horizontal; touch interface simplifies resize and drag operations on zoom window                                                                                                                                                      |
| Signal colors(waveform coding)          | predefined or user-defined color tables for persistence display                                                                                                                                                                                    |

## History and segmented memory

|                     |                                                                                                                                                                        |                                                                                                                                     |                                  |

<sup>6</sup> With R&S®MXO4-B108 memory option. The maximum number of segments depends on the number of active channels and the bit resolution of the acquired data and, therefore, on the settings of the acquisition system settings, such as decimation mode, use of waveform arithmetics or high definition (HD) mode. The maximum number of segments without R&S®MXO4-B108 memory option is limited to 10 000.

## Mask testing

|                               |                                  |                                                                                                                 |

# Options

## R&S®MXO4-B1 mixed signal option

Mixed signal capability is a standard functionality of the MXO 4 series oscilloscopes. The R&S®MXO4-B1 mixed signal option provides 16 digital channels with two R&S®RT-ZL04 probes.

## R&S®MXO4-B6 arbitrary waveform generator

Arbitrary function/waveform generator, 2 analog channels

## R&S®MXO4-K31 power analysis

| Power analysis (requires R&S®MXO4-K31 option) |                                                                                                                                                                                                                                        |                                                                                                                                                                                             |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| General description                           | The R&S®MXO4-K31 power analysis option extends the MXO 4 firmware with measurement functionality focused on switched mode power supplies (SMPS) and DC/DC converters.<br>Up to three sets of power analysis measurements are possible. |                                                                                                                                                                                             |
| Input                                         | quality                                                                                                                                                                                                                                | evaluation of power quality at an AC input; measures real power, apparent power, reactive power, power factor and phase angle of power, frequency, crest factor, RMS of voltage and current |
|                                               | harmonics                                                                                                                                                                                                                              | measures up to the 334th harmonic of the incoming line frequency; precompliance checking for IEC 61000-3-2 (A, B, C, D), RTCA DO-160, MIL-STD-1399, max. limit checks                       |
| Power path                                    | switching loss                                                                                                                                                                                                                         | measures switching loss and conduction loss of a power device                                                                                                                               |
|                                               | turn on/off time                                                                                                                                                                                                                       | measures relationship between input AC/DC and output DC voltage, when turning SMPS off and on                                                                                               |
| Deskew                                        | automated                                                                                                                                                                                                                              | automated compensation of the propagation delay                                                                                                                                             |
| Zero offset                                   | automated                                                                                                                                                                                                                              | automatic compensation of input offset                                                                                                                                                      |

## R&S®MXO4-K36 frequency response analysis

| Frequency response analysis (requires R&S®MXO4-B6 option) |                                          |                                                                    |
|-----------------------------------------------------------|------------------------------------------|--------------------------------------------------------------------|
| Stimulus                                                  | frequency mode                           | single sweep or repeated sweep                                     |
|                                                           | frequency range                          | 10 mHz to 100 MHz                                                  |
|                                                           | amplitude mode                           | fixed or amplitude profile                                         |
|                                                           | amplitude level                          | 10 mV to 10 V into high Z<br>5 mV to 5 V into 50 Ω                 |
| Input and output sources                                  |                                          | channel 1, channel 2, channel 3, channel 4                         |
| Number of test points                                     |                                          | 10 points to 500 points per decade                                 |
| Measurement                                               |                                          | dual pair of tracking gain and phase cursors                       |
| Diagram types                                             | manually changeable vertical window size | parallel display of result window and input and output signal view |
| Result table                                              |                                          | navigation and export functions                                    |
| Scaling                                                   | during and after test                    | auto-scale and manual scaling and positioning                      |

## R&S®MXO4-K500 bus analysis

| Protocol measurements (require corresponding R&S®MXO4-K510 to R&S®MXO4-K560 protocol options) |                                                                                                                                                                         |                                                                                                                                             |
|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Frame to frame                                                                                | measures the distance between the starts of two selectable frame types in seconds                                                                                       | <ul style="list-style-type: none"> <li>from: frame type, field type, field value</li> <li>to: frame type, field type field value</li> </ul> |
| Trigger to frame                                                                              | measures the distance between the trigger event and the start of a selectable frame type in seconds                                                                     | frame identification; frame type, field type, field value                                                                                   |
| Frame to trigger                                                                              | measures the distance between the start of a selectable frame type and the trigger event                                                                                | frame identification; frame type, field type, field value                                                                                   |
| Field value                                                                                   | allows for the selection of frame types and displays the value of a specified field                                                                                     | frame identification; frame type, field type, field value tracked; field type                                                               |
| Main bit rate                                                                                 | measures the main bit rate of a protocol based on the relevant bits in a frame; if a protocol provides multiple bit rates, the most relevant bit rate is being measured | frame identification; frame type, field type, field value                                                                                   |
| Second bit rate                                                                               | for protocols with multiple bit rates, the secondary bit rate is available                                                                                              | only available for protocols with 2 bit rates<br>frame identification; frame type, field type, field value                                  |
| Bus idle                                                                                      | measures the percentage of idle time on a bus; idle time is defined as the time where the bus is not occupied by frames                                                 | no settings                                                                                                                                 |

|                              |                                                                                                   |             |
|------------------------------|---------------------------------------------------------------------------------------------------|-------------|
| Gap                          | measures the distance between the end of a frame to the start of another                          | no settings |
| Frame count                  | counts the total number of frames in each acquisition                                             | no settings |
| Frame errors                 | counts the total number of erroneous frames in each acquisition                                   | no settings |
| Frame error rate             | measures the percentage of erroneous frames in relation to the total frames                       | no settings |
| Consecutive frame error rate | measures the percentage of follow up (consecutive) frame errors, ignoring all single frame errors | no settings |

## R&S® MXO4-K510 low speed serial buses

| Filter | The filter function selects those decode events that shall be shown in the result table. Events that do not match the criteria set will not be displayed in the table when the filter is turned on. |                                                                                                                                                                                                     |

**Extended warranty with a term of one and two years (WE1 and WE2)**

Repairs carried out during the contract term are free of charge <sup>11</sup>. Necessary calibration and adjustments carried out during repairs are also covered.

**Extended warranty with calibration coverage (CW1 and CW2)**

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs <sup>11</sup> and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

**Extended warranty with accredited calibration (AW1 and AW2)**

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs <sup>11</sup> and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing, LLC in the United States and other countries.

<sup>9</sup> The R&S®MXO4-B1 mixed signal option contains two R&S®RT-ZL04 logic probes.

<sup>10</sup> For options installed, the remaining base unit warranty applies if longer than 1 year. Exception: all batteries have a 1 year warranty.

<sup>11</sup> Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.

**Service at Rohde & Schwarz**  
**You're in great hands**

- ▶ Worldwide
- ▶ Local and personalized
- ▶ Customized and flexible
- ▶ Uncompromising quality
- ▶ Long-term dependability

**Rohde & Schwarz**

The Rohde & Schwarz technology group is among the trailblazers when it comes to paving the way for a safer and connected world with its leading solutions in test & measurement, technology systems and networks & cybersecurity. Founded more than 90 years ago, the group is a reliable partner for industry and government customers around the globe. The independent company is headquartered in Munich, Germany and has an extensive sales and service network with locations in more than 70 countries.
