

Duct Tester for V0 Series.

The need to test and document the airtightness of the duct used for fiber installation is increasing. For the V0 and V0 HD units delivered from June 1st with integrated Jetlogger, we can supply a special Duct Clamp for connecting the duct you need to test. By activating the new software program in the JetLogger (duct test), you can document that the duct is airtight. The V0 Duct Clamp Tester comes with a 12mm duct inclusive of a reducer from 12mm to 7mm (can easily be changed with other reducers if needed). We can only guarantee the accuracy of the specifications for machines delivered from June 1, 2023.
